

Save the Great White Shark

Sharks are intelligent and vulnerable and deserve sympathy and respect. Education helps people get rid of the „Jaws“ phenomenon and realize that sharks are a complex and valuable species that lives in the water and does only its best to survive.

Project summary:

Volunteers help with shark research, study their habits and assist travelers diving in shark cages. Shark cage diving funds much-needed research into the habits and reproductive patterns of these graceful giants, and educates people to respect sharks in their natural habitat rather than fear them.

This action-packed volunteer effort will change the way you look at sharks forever.

This project is dedicated to the study and conservation of the great white shark and its environment. The project works with scientists, conservation organizations, and marine resource users to collect data on the great white shark, correct negative misconceptions, and stop the unnecessary slaughter of millions of sharks each year.

Requirements:

- Minimum age: 18 years
- Interest in marine life. Knowledge in marine biology an advantage, but not a must.
- Be industrious, able to work a lot in the wet and able to chop fish.
- Language Skills: Intermediate English
- Minimum duration: 2 weeks

Included:

- Transfer from/to Cape Town airport
- 3-day orientation
- 2 meals daily (breakfast & lunch box)
- Accommodation (shared double room)
- Rechargeable sim card
